

Sobrecarga: operadores de comparación (==, !=)

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
    if(f==g)
```

```
    ...
```

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
    ...
```

```
// fraction.cpp
```

```
bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator==rhs.m_numerator*lhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f==g)
```

```
...
```

f en main

```
m_numerator: 9  
m_denominator: 64
```

g en main

```
m_numerator: 9  
m_denominator: 32
```

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator==rhs.m_numerator*lhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f==g)
```

```
...
```

f en main
lhs en operator==

m_numerator: 9
m_denominator: 64

g en main
rhs en operator==

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
 bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator==rhs.m_numerator*lhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f==g)
```

```
...
```

f en main
lhs en operator==

m_numerator: 9
m_denominator: 64

g en main
rhs en operator==

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator==rhs.m_numerator  lhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f==g)
```

```
...
```

f en main
lhs en operator==

m_numerator: 9
m_denominator: 64

g en main
rhs en operator==

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator  rhs.m_numerator*lhs.m_denominator;
```

```
}
```

9

64

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f==g)
```

```
...
```

f en main
lhs en operator==

m_numerator: 9
m_denominator: 64

g en main
rhs en operator==

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator==rhs.m_numerator*lhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f==g)
```

```
...
```

f en main
lhs en operator==

m_numerator: 9
m_denominator: 64

g en main
rhs en operator==

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator * rhs.m_denominator == rhs.m_numerator * lhs.m_denominator;
```

```
}
```

32

576

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f==g)
```

```
...
```

f en main

lhs en operator==

m_numerator: 9
m_denominator: 64

g en main

rhs en operator==

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
     lhs.m_numerator*rhs.m_denominator==rhs.m_numerator*lhs.m_denominator;
```

```
}
```

9

32

576

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f==g)
```

```
...
```

f en main
lhs en operator==

m_numerator: 9
m_denominator: 64

g en main
rhs en operator==

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator * rhs.m_denominator == rhs.m_numerator * lhs.m_denominator;
```

```
}
```

288

576

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
    → f==g)
```

```
...
```

f en main
lhs en operator==

m_numerator: 9
m_denominator: 64

g en main
rhs en operator==

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator==(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator==(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
→ return lhs.m_numerator*rhs.m_denominator==rhs.m_numerator*lhs.m_denominator;
```

```
}
```

288

false

576

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
    if(f!=g)
```

```
    ...
```

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
    ...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator!=rhs.m_numerator*lhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
    f!=g)
```

```
...
```

f en main

```
m_numerator: 9  
m_denominator: 64
```

g en main

```
m_numerator: 9  
m_denominator: 32
```

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator!=rhs.m_numerator*lhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
    ➡ f!=g)
```

```
...
```

f en main

lhs en operator!=

```
m_numerator: 9  
m_denominator: 64
```

g en main

rhs en operator!=

```
m_numerator: 9  
m_denominator: 32
```

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
➡ bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator!=rhs.m_numerator*lhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f!=g)
```

```
...
```

f en main

lhs en operator!=

m_numerator: 9
m_denominator: 64

g en main

rhs en operator!=

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator!=rhs.m_numeratorlhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f!=g)
```

```
...
```

f en main

lhs en operator!=

m_numerator: 9
m_denominator: 64

g en main

rhs en operator!=

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```

```

```
}
```

9

64

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f!=g)
```

```
...
```

f en main

lhs en operator!=

m_numerator: 9
m_denominator: 64

g en main

rhs en operator!=

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator*rhs.m_denominator!=rhs.m_numerator*lhs.m_denominator;
```

```
}
```

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f!=g)
```

```
...
```

f en main

lhs en operator!=

m_numerator: 9
m_denominator: 64

g en main

rhs en operator!=

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator * rhs.m_denominator != rhs.m_numerator * lhs.m_denominator;
```

```
}
```

32

576

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f!=g)
```

```
...
```

f en main

lhs en operator!=

m_numerator: 9
m_denominator: 64

g en main

rhs en operator!=

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
     lhs.m_numerator*rhs.m_denominator!=rhs.m_numerator*lhs.m_denominator;
```

```
}
```

9

32

576

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
     f!=g)
```

```
...
```

f en main

lhs en operator!=

```
m_numerator: 9  
m_denominator: 64
```

g en main

rhs en operator!=

```
m_numerator: 9  
m_denominator: 32
```

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return lhs.m_numerator * rhs.m_denominator != rhs.m_numerator * lhs.m_denominator;
```

```
}
```

288

576

Operadores de comparación: ejemplo

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
    ➔ f!=g)
```

```
...
```

f en main

lhs en operator!=

m_numerator: 9
m_denominator: 64

g en main

rhs en operator!=

m_numerator: 9
m_denominator: 32

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
➔ return lhs.m_numerator*rhs.m_denominator!=rhs.m_numerator*lhs.m_denominator;
```

```
}
```

288

true

576

Definición de != utilizando ==

```
// main.cpp
```

```
...
```

```
int main()
```

```
{
```

```
    if(f!=g)
```

```
    ...
```

```
// fraction.h
```

```
...
```

```
class Fraction
```

```
{
```

```
    friend bool operator!=(const Fraction & lhs, const Fraction & rhs);
```

```
    ...
```

```
// fraction.cpp
```

```
bool operator!=(const Fraction & lhs, const Fraction & rhs)
```

```
{
```

```
    return !(lhs==rhs);
```

```
}
```
